

before you load the bar, not after.

Tap to expand (full text + Edit), and the empty state collapses to a subtle "+ Add note." Zero extra taps on the logging path.

- **A "New · Per-exercise notes" callout** showing all three states (last note / tapped → read+edit / empty).
- **Rationale updates** — it's now in the component hierarchy tree (under `ExerciseHeader`), the positioning table, and the implementation order. The implementation step flags that it's a genuinely new field: there's no per-exercise note today (`session_notes` is whole-session, template `notes` are programming cues), and recommends mirroring the `session_notes` shape — a small note keyed by `(session_id, exercise_id)`, 280-char cap, reusing the `SessionNoteSchema` validation.

The icon is a line glyph rather than the 🖋 emoji to stay consistent with the app's emoji-free visual language — say the word if you'd rather keep the literal emoji.
